

Digital Literacy Project Report

Title Page

Name: Malaika Bala
Registration Number: 25BCE10867
Branch: B.Tech Computer Science Engineering
Year: First Year
Course Code: CSE0001
Course Title: Digital Literacy
Institution: VIT Bhopal University
Date: March 2026

Introduction

This project is based on the concept of digital literacy and its importance in academic and professional life. As a student digital ambassador, the objective of this project is to understand and apply essential digital skills such as creating online content, building a professional presence, communicating effectively, and staying safe online. Through this project, I explored various digital tools and platforms that are useful for students. Each task in this project helped me gain practical knowledge and improve my understanding of responsible digital behavior.

Methodology

The project was completed using a step-by-step approach by performing each task based on the given guidelines. Online tools such as Canva, GitHub, LinkedIn, Kaggle, HackerRank, and Google Forms were used to complete different components. Each task involved creating digital content, capturing screenshots as evidence, and organizing them in a structured GitHub repository. Proper research was conducted for the cybercrime case study, and all activities were documented in the project report. This systematic approach ensured clarity, organization, and completeness of the project.

Task 1 – Digital Literacy Infographic

In this task, I created a digital literacy infographic using Canva. The infographic explains the meaning of digital literacy and highlights its importance for students. It includes topics such as useful digital tools, safe internet practices, and email etiquette. I used simple design elements, icons, and colors to make the information visually appealing and easy to understand.

One of the challenges I faced was organizing the content in a clear and structured way within a single page. However, this task helped me understand how to present information effectively using digital tools.

Task 2 – Digital Portfolio

In this task, I created and updated my profiles on GitHub, LinkedIn, and Kaggle. These platforms are important for building a professional online presence. GitHub is used for sharing projects and coding work, LinkedIn is used for professional networking, and Kaggle is used for learning data science and working with datasets.

By completing this task, I understood how these platforms can help in career development. In the future, I plan to use GitHub to showcase my projects, LinkedIn to connect with professionals, and Kaggle to improve my data analysis skills.

Task 3 – Platforms

In this task, I explored coding and collaboration platforms. I completed a beginner-level coding problem on HackerRank, which helped me understand basic problem-solving and programming logic. I also created a Google Form quiz related to digital literacy, which included multiple-choice and short-answer questions.

This task helped me learn how to use online platforms for both learning and collaboration. These tools will be useful in my academic journey for practicing coding and creating interactive content.

Task 4 – Email Etiquette

In this task, I wrote two professional emails: one requesting an assignment extension and another expressing interest in an internship opportunity. I also created a checklist of social media do's and don'ts for responsible online behavior.

This task helped me understand the importance of clear and professional communication. Poor digital communication can lead to misunderstandings and missed opportunities. Using proper structure, polite language, and clear subject lines can improve communication effectiveness.

Task 5 – Cybercrime Awareness

In this task, I studied phishing as a type of cybercrime. I learned how attackers trick users into sharing sensitive information through fake emails or websites. I also created a prevention checklist to help users stay safe online.

I was surprised by how easily people can fall victim to such attacks. This task made me more aware of online threats, and I will be more careful while clicking links and sharing personal information in the future.

Learning Outcomes

Through this project, I gained a better understanding of digital literacy and its importance. I learned how to use various digital tools effectively, create and manage online profiles, and communicate professionally. I also developed awareness about cyber threats and learned how to protect personal information online. This project improved my confidence in using digital platforms for academic and professional purposes.

Challenges Faced

Some challenges faced during the project included learning new platforms, organizing content effectively, and managing multiple tasks within the given time. However, these challenges helped in improving problem-solving skills and adaptability.

Conclusion

This project provided valuable knowledge and practical experience related to digital literacy. It helped in developing essential skills required for academic success and future career growth. The learning from this project will be useful in maintaining a responsible and effective digital presence.
